With the Wavewood design a new diffuser product arises. Simulating a QRD and MLS sequence the new Wave Wood Diffuser is an ideal solution to those who search balanced sound ambiances that simultaneously control the exceeding energy in a room, flutter echoes, and still maintain a living and bright sound. It is particularly effective in treating medium and high frequencies.

This panel is made of high density polystyrene. The idea is to have a more competitive diffuser with low weight and easier application. It's a cost effective product with good appearance that can be applied in multiple spaces.

Applications:

Listening Rooms, Home Theaters, Recording and Broadcast Studios, Post Production Studios, Performance Spaces, Rehearsal Rooms, Conference and Teleconference Rooms, Public Spaces, Auditoriums, etc.
